

FedEx Ship Manager® Server Release Notes for v 10.0.4 CD Version

The following are included in this version of FedEx Ship Manager Server v 10.0.4

- Upgrade Paths
- New Features and Enhancements since FedEx Ship Manager Server v 10.0.3
- Software Fixes Included in FedEx Ship Manager v 10.0.4

Upgrade Paths

This executable can be used as a clean installation of FedEx Ship Manager Server v 10.0.4., and can upgrade over previously released FedEx Ship Manager Server v 7.7.7, 8.5.1, 8.5.2, 10.0.2 and 10.0.3.

New Features and Enhancements since FedEx Ship Manager Server v 10.0.3

Intra Canada Harmonized Sales Tax in Ontario and British Columbia

The Ontario and British Columbia provincial governments are introducing a Harmonized Sales Tax (HST) effective July 1, 2010. This is a mandatory change that will affect all payers for shipments to, from and within the Province of Ontario and British Columbia. This feature incorporates the move of Ontario (ON) and British Columbia (BC) from the Goods and Services Sales (GST) tax category to the HST category. For more information about this change, go to fedex.com/ca_english/news/hst.html

FedEx SmartPost® Enhancements

- The weight-rounding default has been updated based on most recent FedEx SmartPost specifications
- Openship Edit Piece now available for FedEx SmartPost customers. This is indicated by utilizing Field 541 position 5 (Edit a Piece / Package). All variables can be edited.
- Openship Edit Shipment now available for FedEx SmartPost customers. This is indicated by utilizing Field 541 position 6 (Edit a Shipment). The only variable that can be edited at shipment level is the Ship Date utilizing Field 24.

Field Modifications and Additions

| Field ID | Field Length | Data Type | Input/ Output | FedEx Shipping | | Field Description |

| 539 | Max=9 | N | O | FDXE FDXG | All | Modified: CA Harmonized Sales Tax applied to Canadian shipments. HST= Percentage of net charge (not including QST), applied to FedEx shipments from any CA province (except Quebec) to British Columbia / Newfoundland-Labrador / New Brunswick / Ontario / Nova Scotia. |
| List Harmonized Sales Tax (HST) | | | | | | |
| 1937 | Max=11.2 | N | O | FDXE FDXG | All | Modified: CA Harmonized Sales Tax applied to Canadian shipments. HST= Percentage of net charge (not including QST), applied to FedEx shipments from any CA province (except Quebec) to British Columbia / Newfoundland-Labrador / New Brunswick / Ontario / Nova Scotia. |

Software Fixes Included in FedEx Ship Manager Server v 10.0.4

FedEx Ship Manager Server v 10.0.4 contains many fixes that may be valuable to your business. The table below lists the defects that have been corrected in the FedEx Ship Manager Server v 10.0.4.

| v 7.7.7 | |
|----------------|---|
| 1 | FedEx Collect on Delivery shipments produce error "No label generated". |
| v 8.4.7 | |

| | |
|-----------------|---|
| 2 | FedEx Ship Manager Server is showing an incorrect delivery time in field 1981. |
| v 8.5.0 | |
| 3 | FedEx Ground [®] hazardous materials certification report that is reprinted with the report viewer is not printing in landscape. |
| 4 | Using the 025 Rate Available Services request transaction for Canadian destination, the rate quote for FedEx International Economy [®] is not returned, but is returned using the 020 Global Ship request transaction. |
| 5 | Unable to process Saturday pickup requests from Pennsylvania ZIP code 18041. |
| 6 | When using a 403 Tracking request transaction with multiple clients, tracking service hangs and produces an error message "Track processing error ... please try again later." |
| 7 | Usage of an invalid pre-assigned tracking number produces varying behavior between Openship and single shot shipping methods. |
| 8 | If field 2399 is the last field (or highest field number) in the transaction and is left blank then FedEx Ship Manager Server will not return a reply. |
| 9 | The primary key for the tracking number table is missing the sequence column as part of the key that is needed to ensure uniqueness. |
| V 10.0.1 | |
| 10 | When a transaction is sent while using the custom label generator utility, three labels are printed when only two are expected. |
| 11 | When adding a new parent meter #, with the FedEx Ship Manager Server configuration screen open, the configuration screen may show "saving meter details, please wait " indefinitely. |
| 12 | FedEx Express [®] shipping labels may have accumulated dry ice weight printed on each label instead of the total dry ice on the master label only and each child label = 0. |
| 13 | When processing Hold at FedEx Location shipments, the recipient contact name field 12 is not printing on label. |
| 14 | The trans.in file may improperly wrap. |
| 15 | List rates are not being returned when rating with Alternate Sender Address. |
| 16 | When using field 187 with the DIB values for labels, 48D and 49D does not scale to the thermal printer like 46D. |
| 17 | Incorrect FedEx Express bundled rate is recorded in the database and on the end of day report after Close. |
| 18 | The FedEx Collect on Delivery return label reflects the FSMS configured sender data instead of the overwritten values when using the FedEx Collect on Delivery return address fields. |
| 19 | When batch processing, an 023 Global Delete request transaction in a file is not processed, therefore deletion of that tracking number does not occur. |

| | |
|-----------------|---|
| 20 | When using either multi-occurrence or Openship methods of shipping transactions for FedEx SmartPost, the piece rate quotes are provided rather than shipment rate quotes. |
| 21 | Unable to process FedEx SmartPost shipments to APO destinations. |
| 22 | Incorrect version information is being returned when processing the 050 Service Types and Special Services request transaction. |
| 23 | When upgrading from FedEx Ship Manager Server v 7.7.5 to FedEx Ship Manager Server 10.0.1, the current FedEx Ground tracking number is reset to the beginning of the range. |
| 24 | While processing an international shipping transaction an incorrect error is displayed. |
| 25 | When upgrading from FedEx Ship Manager Server v 7.7.5 to FedEx Ship Manager Server 10.0.1, report type is reset to default. |
| 26 | FedEx Ship Manager Server v 7.7.7 to v 10.0.1 Upgrade - Erroneous errors are being recorded in FedEx App Event Log referring to non-existent services |
| 27 | For FedEx SmartPost pre-assigned tracking numbers, the tracking number field 29 returns a different value in the 1st two positions when the FedEx SmartPost service type /postal indicia field 2417 is 01 vs. 1. |
| 28 | When using the 025 transaction to a PR postal code, error messages have been enhanced for service availability. |
| v 10.0.2 | |
| 29 | Openship service not responding when field 2210 is greater than 20 characters. |
| 30 | T1 status is not uploaded to Visa |
| 31 | No list rates returned with pay type = bill recipient. Error message "CRSV Error-com.fedex.com.RatingException: Unable to load CUST for meterNbr:" |
| 32 | While processing an international shipping transaction with Bill third party as the pay type, an error message "CRSV Error - com.fedex.rate.RatingException: Unable to load CUST for meterNbr:" is returned. |
| 33 | The Harmonized Tariff Schedule code passed in field 81 in the 020 Global Ship Request transaction is printed on the FedEx International Priority DirectDistribution [®] Consolidated Commercial Invoice as another number. |
| 34 | Future tracking number ranges in the tracking numbers tab in configuration settings is reset when apply or apply and exit is selected. |
| 35 | Export files are not populated. |
| 36 | While processing international Openship transactions, each add a piece transaction is incrementing the total billed weight in field 60 by 1 lb., instead of the actual billed weight of each piece. |
| 37 | After receiving a CRSV Rating Exception for a Child Meter in a reply, the next CLOSE receives a "Close is already running" message. |

| | |
|-----------------|--|
| 38 | When using the Meter Registration Utility, domestic list rates download is unsuccessful. |
| 39 | FedEx SmartPost duplicate tracking numbers are occurring. |
| 40 | FedEx SmartPost Openship shipments do not CONFIRM and will not CLOSE. |
| 41 | Multiple instance of FedExdeman.exe running in processes tab in task manager. |
| 42 | Field 1900 is being returned in the reply when it should not be. |
| 43 | When using declared value field 69, the 2 decimal place values are printed on the doc tab. |
| 44 | Configuration Manager services stop after transactions are sent. |
| 45 | FedEx [®] Transborder Distribution discounts not implementing for FedEx Ground shipments. |
| 46 | FedEx Transborder Distribution contact name not printing. |
| 47 | As transactions are processing, the error "Openship not responding" is returned after a certain period of time. |
| v 10.0.3 | |
| 48 | On the tracking number tab within configuration manager, the check digit on the future tracking number range is not present. |
| 49 | The future day rate quote produces error "Rate Expired Date in Rate Table". |
| 50 | List declared value surcharge field 1523 is not returned. |
| 51 | When shipping intra-Canada shipments via FedEx Express the rate quote should not change based on the number of pieces but on the weight. |
