

Solution Overview

CMS WorldLink is a fully scalable browser-based transportation management system. Our multi-carrier shipping solution will grow as your business and shipping volumes grow. Scalability includes the ability to use a single server that supports fulfillment centers around the world, or a separate application server and database server with multiple CPUs within each server and load balancing across multiple application servers.

As a robust transportation management solution, CMS WorldLink, allows you to implement and enforce your business rules easily from the central server location. No more worrying about how each business is choosing carriers because you control that from your central location. This functionality means consistency between all business locations, which will help you drive business to the right carriers and allow you to negotiate better discounts and service.
