FedEx®

ScanData provides an intelligent parcel TMS designed to streamline operations, reduce transportation costs, and easily adapt to a dynamic carrier network. With installations in the most complex and high-volume parcel shipping environments—including leaders in the Retail, Pharmaceutical, and Floral industries—ScanData has been a trusted logistics partner since 1986.

ScanData's flagship PTMS product has been in production in high volume, complex parcel shipping environments for over 20 years. Built on a Microsoft platform, our modular software integrates into existing ERP, WMS, OMS, and proprietary host systems via standard industry data protocols, including XML. Our solution molds to your business requirements, not the other way around. Working with industry leaders in the Retail, Pharmaceutical, and Perishable industries, we have tailored our parcel TMS to handle custom configurations for omnichannel distribution, carrier agility, temperature sensitivity and/or cold chain variables, regulatory requirements, and supply chain complexities. Our experience results in expert consultation, seamless integration, and rapid deployment – and the same veteran engineers that build your system, support your system 24x7.
