FedEx Ship Manager Server v 16.0.1 will upgrade over the following software versions:

FedEx Ship Manager Server v 16.0.1 Upgrade				
14.0.1	14.0.3	14.0.4	14.0.5	14.0.7
15.0.1	15.0.3			

Summary of Features

FedEx Ship Manager Server version 16.0.1 contains features and functionality to enhance your shipping experience. The FedEx Ship Manager Server v 16.0.1 features outlined on the following page will help your day-to-day operations run more smoothly and make your shipping process work smarter.

Customer Support

To take advantage of the new features, contact your FedEx customer integration consultant or if you have questions or need assistance, please contact the FedEx Technical Support Center at **1.877.FDX.Assist 1.877.339.2774**, Monday through Friday, 7 a.m. to 9 p.m. CST; and Saturday, 9 a.m. to 3 p.m. CST.

Additional Resources

Go to fedex.com/server to learn more about FedEx Ship Manager Server and how integration with your existing business systems can make shipping around the world faster and easier. This business site will provide you with online developer resources along with feature and service information.

International Shipping Enhancements

Signature Options are expanded internationally allowing you to select a desired signature option for international shipments, similar to what's available for domestic shipments.

IPD/IED/IDF Clearance Enhancements make FedEx International Priority DirectDistribution®, FedEx International Economy DirectDistributionSM and FedEx International Priority DirectDistribution® Freight shipments compliant with Canada Border Services Agency regulations by making the commodity data available electronically and collecting additional required data. This helps you avoid penalties and delays, facilitating continued shipping for these shipments into Canada.

Reclassification of Clearance Entry Fee (CEF)

provides you the ability to bill the CEF and associated taxes along with duties and taxes to the shipper, recipient or third party. CEF is reclassified from a transportation surcharge to an ancillary fee.

Additional Document Types for ETD Uploads

allows you to choose Microsoft Office 2010 Word (Docx) and Excel (Xlsx) documents as additional supported document types for Electronic Trade Documents (ETD) uploads.

Hold at Location (HAL) lookup expansion

provides the Hold at FedEx Location lookup functionality to all FedEx Express locations, where this service is available.

Notification Enhancements

Estimated Delivery Notification (EDN) brings you a new notification option, which triggers an email on the delivery date.

Dangerous Goods Shipping Enhancements

Dangerous Goods Enhancements offer you a standard data structure and transmission protocol to upload dangerous goods documentation data. This protocol handles the currently applicable regulations (IATA/ICAO, 49 CFR, ADR) and additional regulations as needed. This data is later used by FedEx Express, FedEx Ground or FedEx Freight operations.

Other Shipping Enhancements

FedEx Ground Human Readable Barcode on labels is now encrypted.

Customized End of Day (EOD) Close Report

enables customization or selection of End of Day (EOD) reports to print instead of printing all the reports.

Transaction Date Time Stamp Enhancement

brings the ability to add date and time stamp to the transaction logs.

Enhanced Origin Edits

provide confirmation of pickup availability by selected shipment options to help prevent shipment pickup delays.

Systems Enhancements

Demand Download Utility Enhancement

categorizes the different download options under separate tabs. It will also enable you to initiate downloads for multiple meters at the same time.

Support Windows® 10 Operating System

enables migration to the latest Microsoft® desktop operating system. (Support for Windows XP operating system is discontinued in FedEx Ship Manager Server v16.0.1).

A new printer, ZT410, is now supported besides the existing ZPL thermal printers.

Enhanced Connectivity Test

allows connectivity testing to additional FedEx backend systems.

FedEx Ship Manager Server database

is upgraded to Sybase v.16 to achieve better performance.
