Summary of Features

FedEx Ship Manager Server version 17.0.1 contains features and functionality to enhance your shipping experience. The FedEx Ship Manager Server v 17.0.1 features outlined on the following page will help your day-to-day operations to run more smoothly and make your shipping process work smarter.

Customer Support

To take advantage of the new features, contact your FedEx customer integration consultant or if you have questions or need assistance, please contact the FedEx Technical Support Center at **1.877.FDX.Assist 1.877.339.2774**, Monday through Friday, 7 a.m. to 9 p.m. CST; and Saturday, 9 a.m. to 3 p.m. CST.

Additional Resources

Go to [fedex.com/server](https://www.fedex.com/server) to learn more about FedEx Ship Manager Server and how integration with your existing business systems can make shipping around the world faster and easier. This business site will provide you with online developer resources along with feature and service information.

International Shipping Enhancements

FedEx® Electronic Trade Documents (ETD) enhancements allow you to upload your trade documents at any time after completing your shipment, but before the courier picks up the shipment. For pre- and post- shipment uploads, the file size has been increased from 1 MB to 5 MB. You can now utilize the FedEx Electronic Trade Documents process and upload your trade documents regardless of whether or not the destination country accepts trade documents electronically. This will aid in clearance. If the destination country requires printed trade documents, you will be able to do so.

FedEx International Ground Consolidation (IGC) shipment provides a way to consolidate your multiple international FedEx Ground packages from Canada to the US and US to Canada into a single consolidated shipment that clears customs as one entry, thereby significantly reducing your brokerage costs. It can also help to reduce the time in transit for your packages and provides end-to-end visibility for your recipient.

Dangerous Goods Shipping Enhancements

Dangerous Goods (FedEx® DG Ready) Enhancements offer you a simplified way to ship FedEx Express dangerous goods (DG) and FedEx Ground hazardous materials (hazmat) when you use a 3rd party FedEx DG Ready Solution to create your DG declaration or hazmat shipping paper and upload the data to FedEx before creating a shipping label. FedEx DG Ready allows you to ship DG and hazmat with confidence as you reduce errors and save time.

Learn more and find a list of 3rd party FedEx DG Ready solution providers at fedex.com/dgready.

Lithium Batteries Special Service Shipments now allow you to choose an appropriate classification type for your Section II Lithium Batteries.

Notification Enhancements

Estimated Delivery Notification (EDN) brings a new notification option for your FedEx SmartPost® shipments, which triggers an email on the delivery date.

Messaging Notifications feature allows you to set up notifications of key events generated during FedEx Ship Manager Server operations and can help you mitigate potential problems.

Other Shipping Enhancements

Third Party Billing for FedEx SmartPost® offers a new billing option for payers, who perform FedEx SmartPost shipments.

Hold at Location service now provides additional flexibility to select a particular "Hold at Location" matching with the specified location ID.

Master Air Waybill Label of your FedEx International Priority DirectDistribution® shipment now supports printing of your shipment description.

Service Types and Special Services Transaction extends the lookup availability for the intra country shipments to support all applicable origin destination countries.

Systems Enhancements

Customized Transaction Buffer Memory Size feature allows you to configure an optimal memory size that is most suitable for your shipping transactions. It serves as an excellent solution to optimize your FedEx Ship Manager Server performance.

Windows® Server 2016 support in FedEx Ship Manager Server provides you an opportunity to migrate to an operating system for better software performance, fewer patches and updates, faster restarts, better resource utilization, and enhanced security.

Migrate Account and Meter Information functionality enables you to export and import your meter information. During import, the meters can be configured automatically by using the earlier exported information and the required meter components can be downloaded from the FedEx server. It simplifies and expedites your FedEx Ship Manager Server software installation.
