

See What's New with FedEx Ship Manager[®] Server v16.0.1

Experience the difference

The 2016 version of FedEx Ship Manager Server will enable you to process international shipments faster and will further streamline your dangerous goods shipping process. It will also provide more visibility and control over the delivery schedule and options. Your day-to-day operations will run smoother, and shipping processes work smarter.

Here are the highlights

Signature Options expanded internationally allowing you to select a desired signature option for international shipments, similar to what's available for domestic shipments.

Estimated Delivery Notification (EDN) brings you a new notification option, which triggers an email on the delivery date.

Dangerous Goods Enhancements offer you a standard data structure and transmission protocol to upload dangerous goods documentation data. This protocol handles the currently applicable regulations (IATA/ICAO, 49 CFR, ADR) and additional regulations as needed. This data is later used by FedEx Express, FedEx Ground or FedEx Freight operations.

IPD/IED/IDF Clearance Enhancements make FedEx International Priority Direct Distribution[®], FedEx International Economy Direct DistributionSM and FedEx International Priority Direct Distribution[®] Freight shipments compliant with Canada Border Services Agency regulations by making the commodity data available electronically and collecting additional required data. This helps you avoid penalties and delays, facilitating continued shipping for these shipments into Canada.

Support Windows[®] 10 Operating System enables migration to the latest Microsoft[®] desktop operating system. (Support for Windows XP operating system is discontinued in FedEx Ship Manager Server v16.0.1)

Reclassification of Clearance Entry Fee (CEF) provides you the ability to bill the CEF and associated taxes along with duties and taxes to the shipper, recipient or third party. CEF is reclassified from a transportation surcharge to an ancillary fee.

FedEx Ground Human Readable Barcode on labels is now encrypted.

Customized End of Day (EOD) Close Report enables customization or selection of End of Day (EOD) reports to print instead of printing all the reports.

Additional Document Types for ETD Uploads allows you to choose Microsoft Office 2010 Word (Docx) and Excel (Xlsx) documents as additional supported document types for Electronic Trade Documents (ETD) uploads.

FedEx Ship Manager Server database is upgraded to Sybase v.16 to achieve better performance.

A new printer, ZT410, is now supported besides the existing ZPL thermal printers.

Enhanced Connectivity Test allows connectivity testing to additional FedEx backend systems.

Hold at Location (HAL) lookup expansion provides the Hold at FedEx Location lookup functionality to all FedEx Express locations, where this service is available.

Transaction Date Time Stamp Enhancement brings the ability to add date and time stamp to the transaction logs.

Demand Download Utility Enhancement categorizes the different download options under separate tabs. It will also enable you to initiate downloads for multiple meters at the same time.

Enhanced Origin Edits provide confirmation of pickup availability by selected shipment options to help prevent shipment pickup delays.

Learn More

To take advantage of all the new features, contact your FedEx customer integration consultant or contact the FedEx Technical Support Center at 1.877.339.2774 and say "FedEx Ship Manager® Server" when prompted. You can also go to the newly designed FedEx Developer Resource Center at fedex.com/us/developer/ship-manager-server for interactive self-help tools, software information, documentation and Alert Notification System registration in order to receive email updates.
